

ESCMID Global Machine learning workshop 2025: Installing Orange – Windows

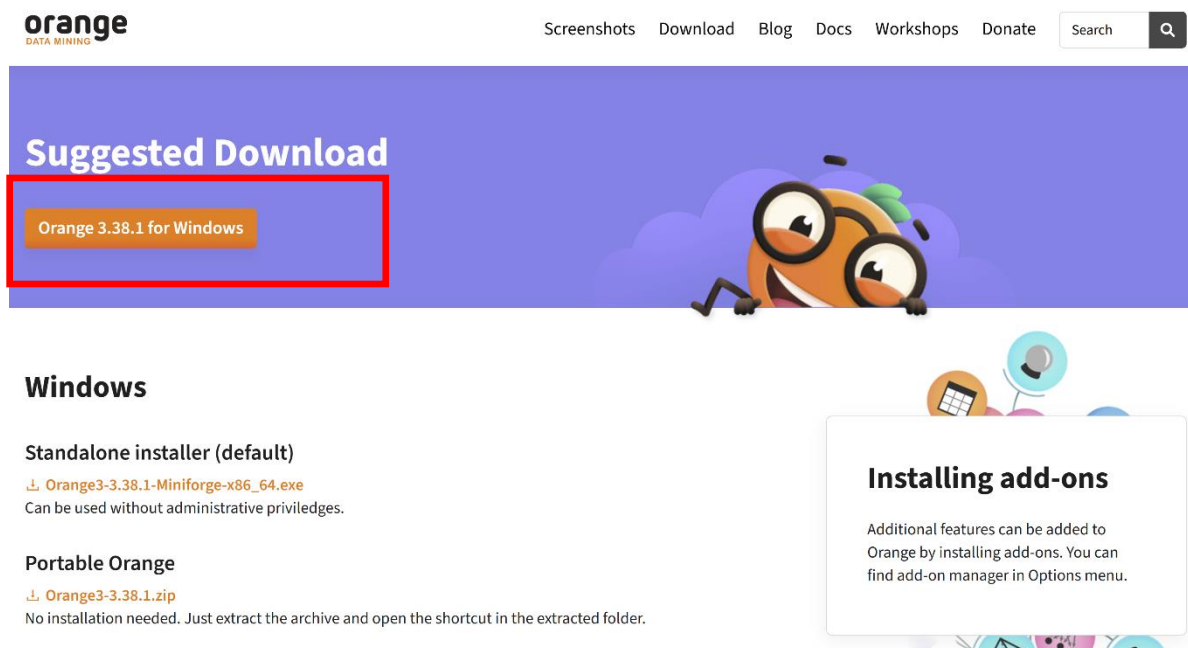

Last updated 20/02/2025

This document provides a brief description of how to install the orange data mining software on your windows computer / laptop. Any problems with installing Orange, please contact me at benjamin.mcfadden@research.uwa.edu.au and I will personally assist you.

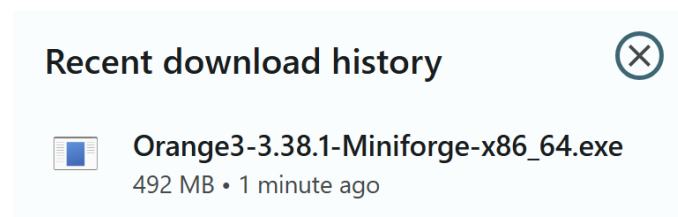

- 1- Visit <https://orangedatamining.com/>

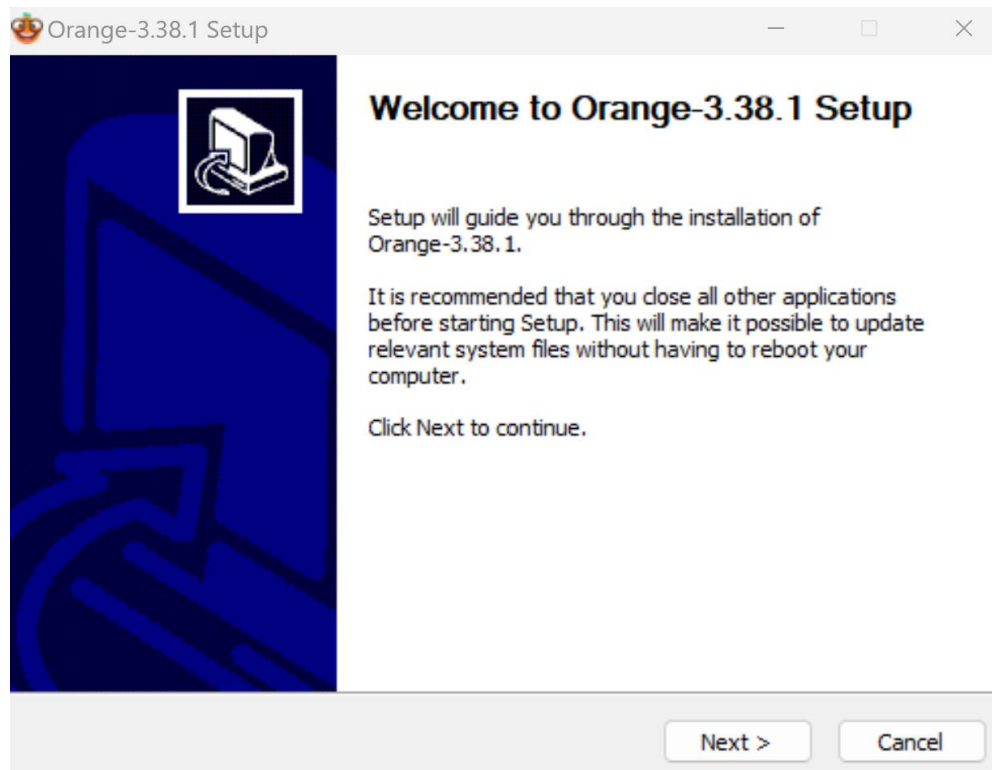

- 2- After clicking the “Download Orange 3.38.1” button in the previous image, you will see the following screen.

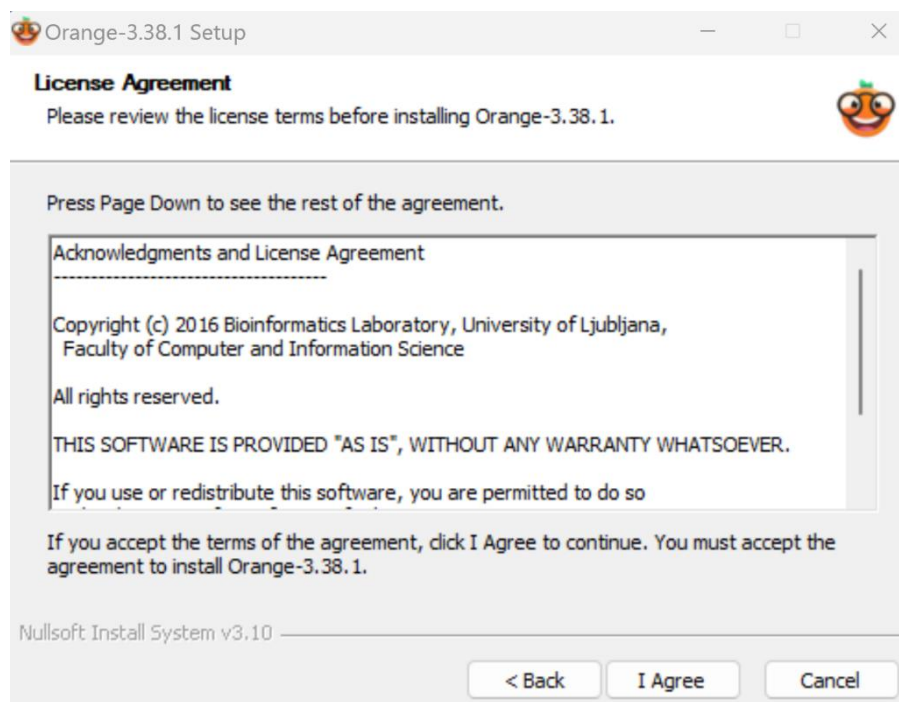

- 3- After clicking on the standalone installer, outlined in red in the previous image, an executable will be downloaded which is shown in the following screenshot.

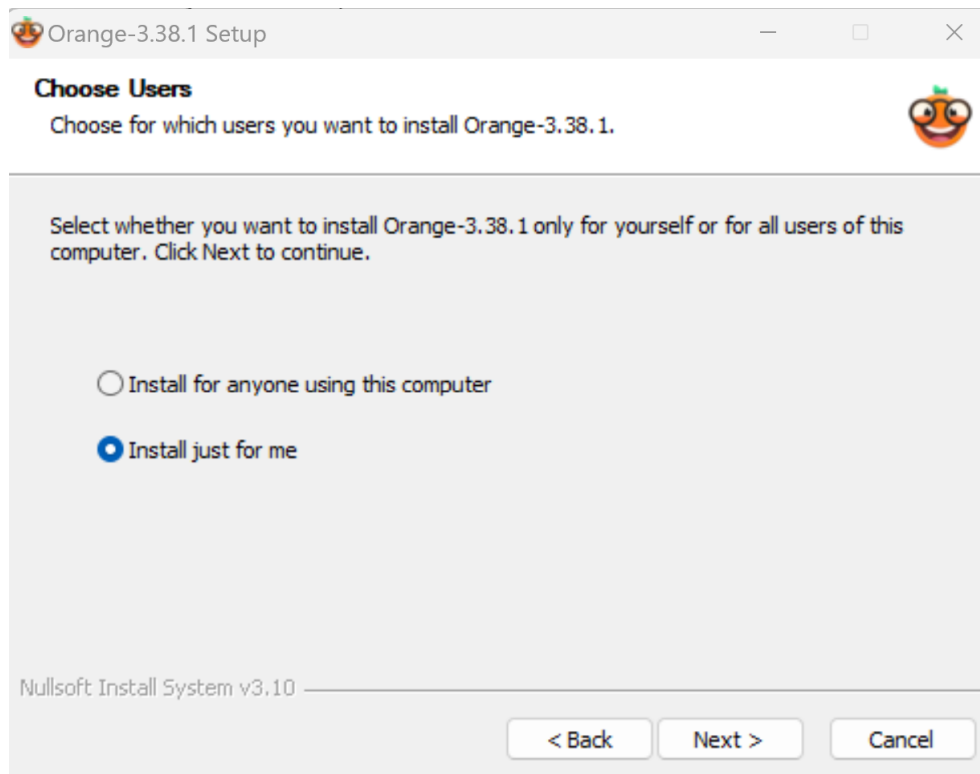

- 4- After clicking on the executable, you will see the following screenshot. Then press next.

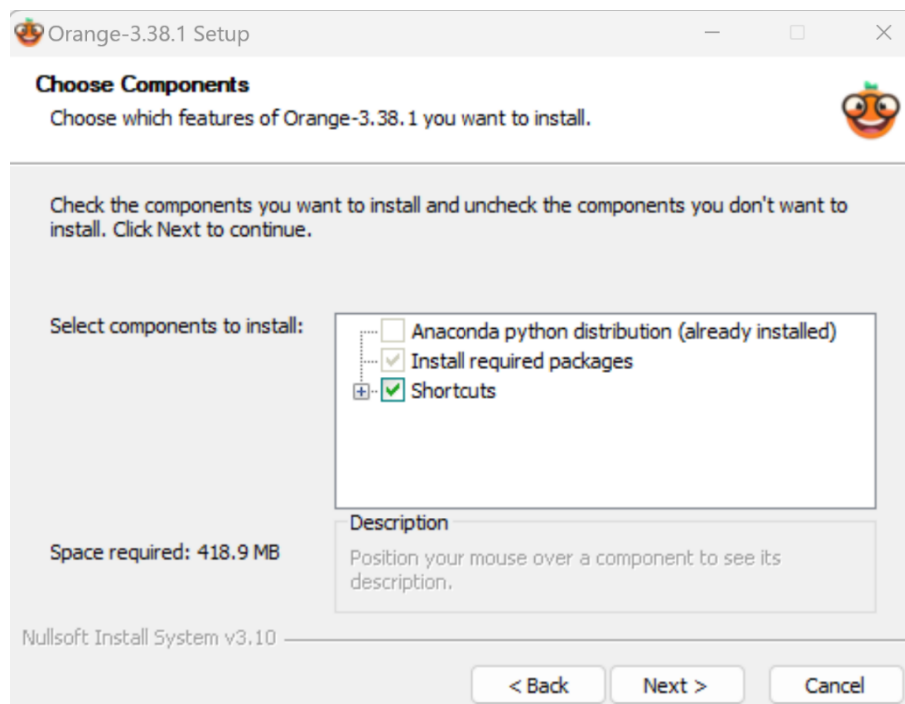

- 5- Agree to the license agreement.

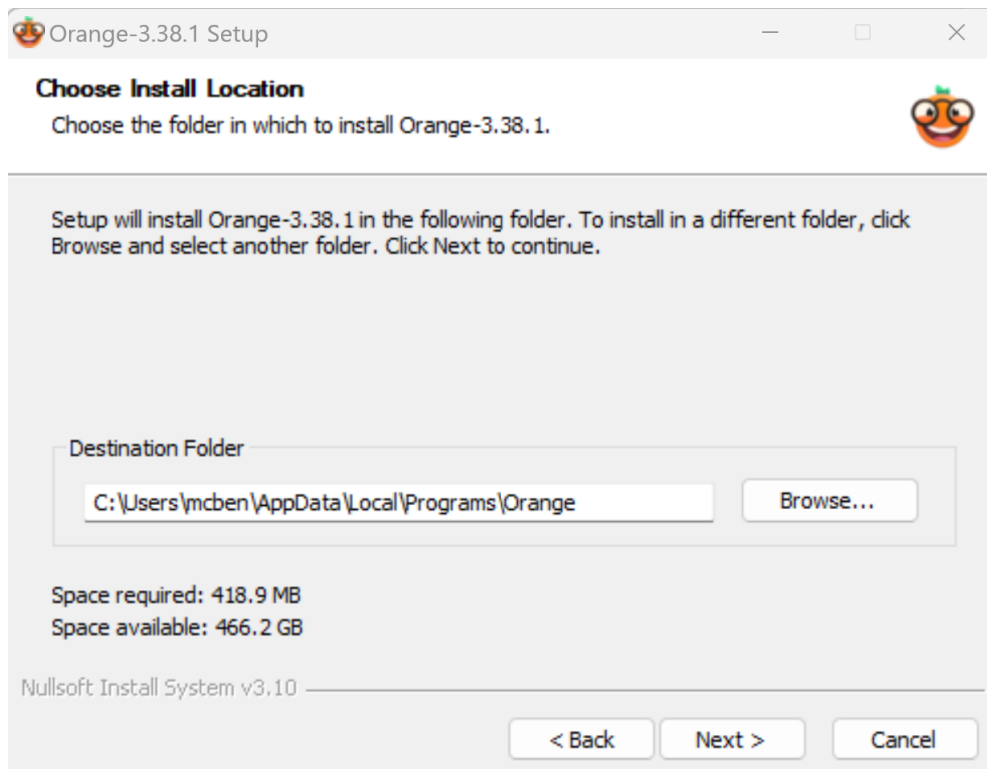

6- Select “Install just for me”, then click next.

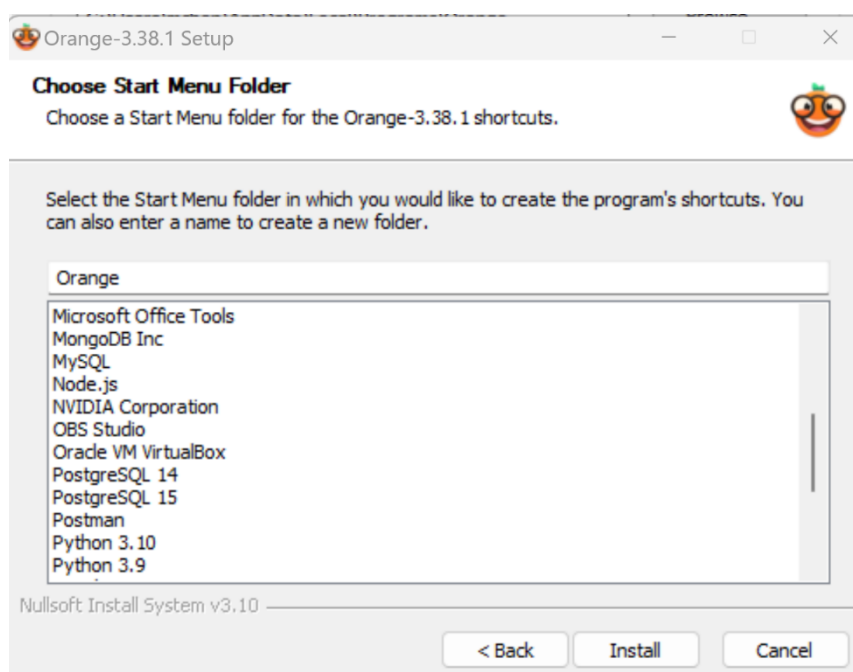

7- Leave the default settings and press next.

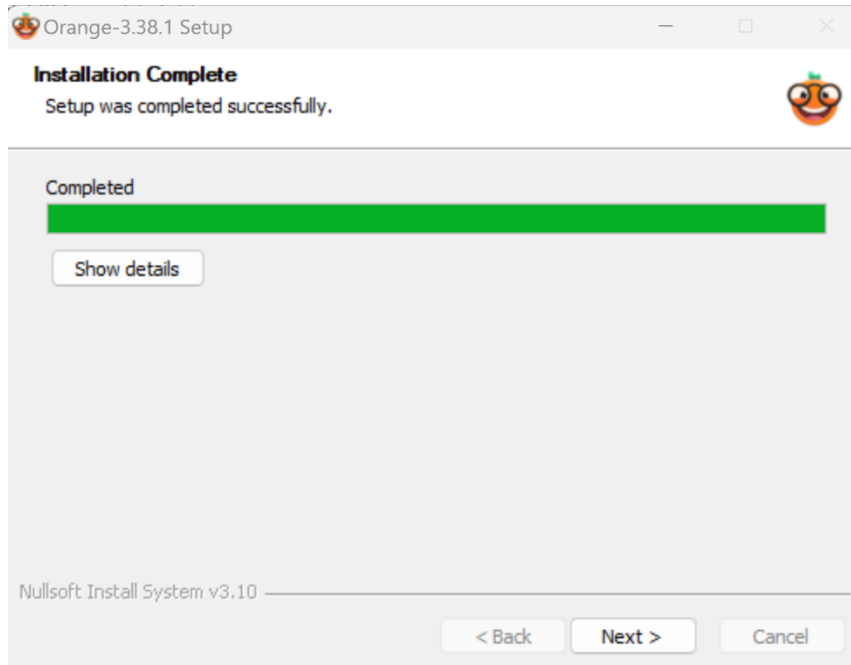

- 8- Ensure that you have enough space on your system for the installation, then click next.

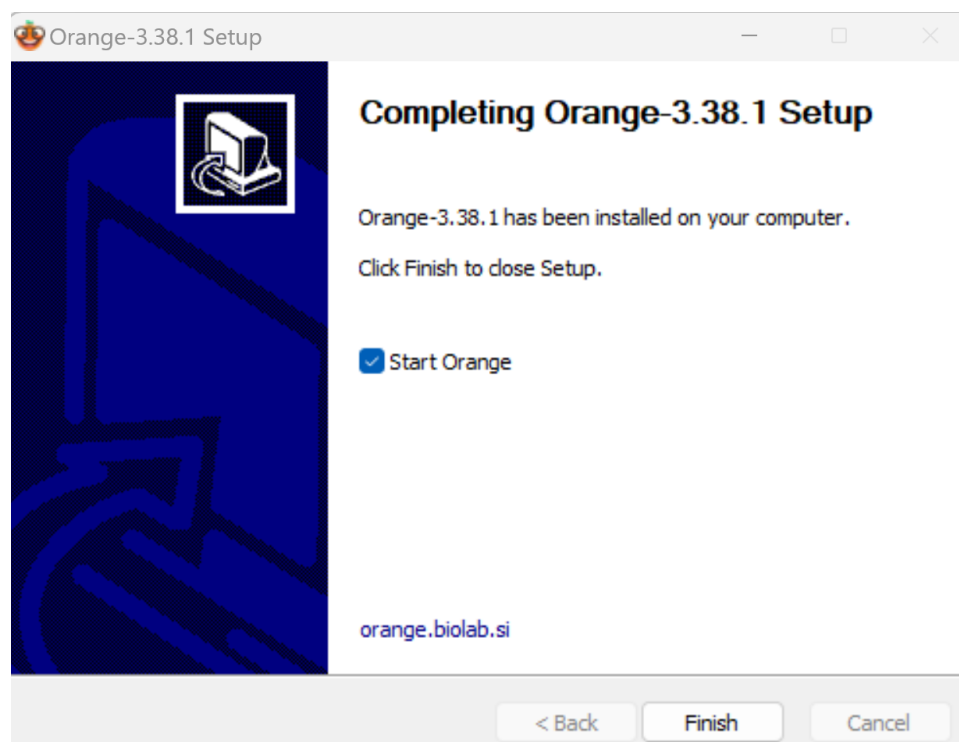

- 9- No changes necessary here. You can press Install.

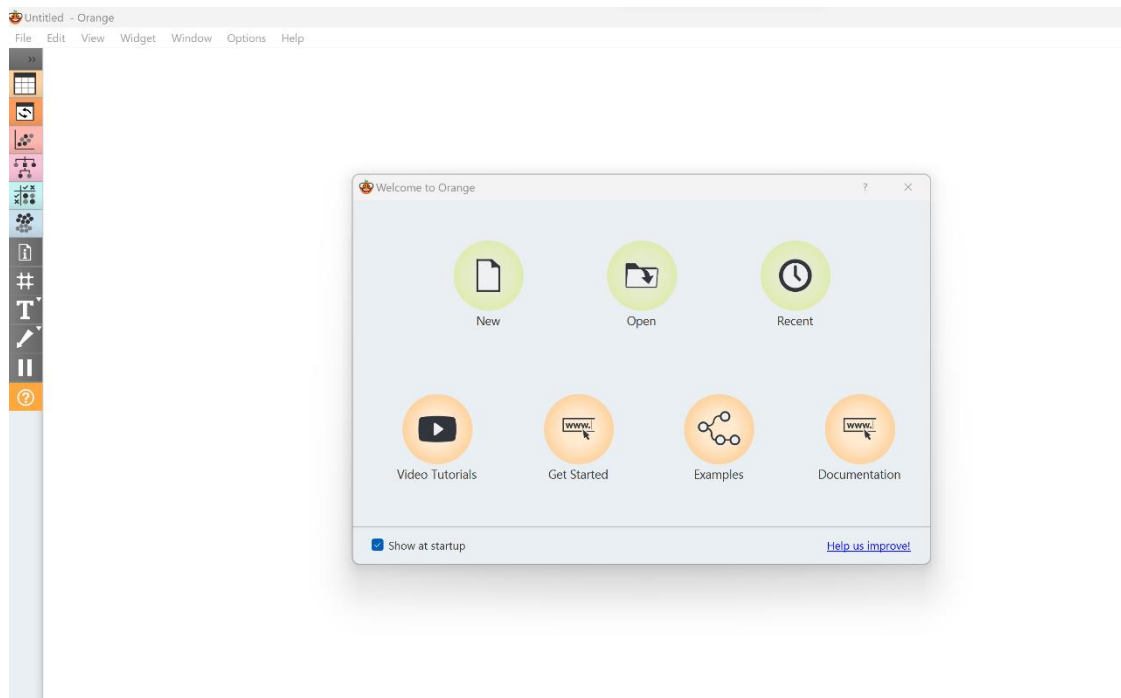

10- The Orange software will begin installing. When complete, you can press Next.

11- Before pressing Finish, ensure that the “Start Orange” checkbox is clicked.

12- The Orange data mining software application will open, and you should see the following screen

13- The Orange software can be viewed / opened by going to the windows start menu and searching for Orange and clicking on the Orange icon.
